The transport of secretory proteins takes place through organelles in the order:

- (a) RER → SER → Golgi → Secretory vesicles
- (b) SER → RER → Golgi → Secretory vesicles
- (c) RER → SER → Secretory vesicles → Golgi
- (d) RER → Golgi → SER → Secretory vesicles

03

The function of rough endoplasmic reticulum is to synthesize:

- (a) Lipid
- (b) Carbohydrate
- (c) Protein that will be secreted by the cell**
- (d) Cytoplasmic protein necessary for the cell own existence

04

Granular endoplasmic reticulum is most abundant in cell types that are involved in:

- (a) Transport of calcium ions
- (b) Producing steroid hormones
- (c) Lipid metabolism
- (d) **Protein synthesis**

05

Rough Endoplasmic Reticulum is called 'rough' because:

- (a) Rough texture of the surface
- (b) Surface is studded with membrane proteins
- (c) Surface is studded with ribosomes**
- (d) All of these

06

**Smooth endoplasmic reticulum:**

- (a) Sometimes has ribosomes attached to its membranes
- (b) Is rarely found in skeletal muscle cells
- (c) Is present in cells where drug detoxification is taking place**
- (d) All the above

07

One of the functions of smooth endoplasmic reticulum is:

- (a) Protein synthesis
- (b) Regulation of intracellular calcium distribution**
- (c) Excretion
- (d) Phagocytosis

08

Which of the following statements are true regarding endoplasmic reticulum?

- (a) Endoplasmic reticulum provides structural framework to the cell
- (b) Endoplasmic reticulum acts as an intracellular transporting system
- (c) Smooth endoplasmic reticulum is involved in synthesis of lipids
- (d) All of these

09

Concerning rough endoplasmic reticulum, it is:

- (a) Composed of membranous tubules and sacs
- (b) The site of protein synthesis that will be secreted by the cell
- (c) Has ribosomes attached with
- (d) All of the above**

10

A cell with a predominance of smooth endoplasmic reticulum is likely specialized to:

- (a) Store large quantities of water
- (b) Import and export large quantities of protein
- (c) Actively secrete large quantities of protein
- (d) Synthesize large quantities of lipids**

11

Tay-Sachs disease is a human genetic abnormality that results in cells accumulating and becoming clogged with very large, complex, undigested lipids. Which cellular organelle is most likely defective in this condition?

- (a) The lysosome
- (b) The Golgi apparatus
- (c) The smooth endoplasmic reticulum
- (d) The rough endoplasmic reticulum

12

The liver is involved in detoxification of many poisons and drugs. Which of the following structures is primarily involved in this process and, therefore, abundant in liver cells?

- (a) Rough endoplasmic reticulum
- (b) Smooth endoplasmic reticulum**
- (c) Golgi apparatus
- (d) Nuclear envelope

13

Mitochondrial component connected with ATP synthesis:

- (a) Inner membrane
- (b) Outer membrane
- (c) Matrix
- (d)  $F_1$  particles**

14

Inner membrane involutions of mitochondria are called:

- (a) Lamellae
- (b) Cristae**
- (c) Thylakoid
- (d) Tubules

15

Mitochondrial cristae are sites of:

- (a) Kreb's cycle
- (b) Oxidation reduction reaction**
- (c) Protein synthesis
- (d) Lipid synthesis

16

Mitochondria are self-replicating organelles as they have:

- (a) Thylakoids
- (b) Oxyosomes
- (c) Ribosomes
- (d) DNA**

17

Which of the following statements regarding mitochondrial membrane is not correct?

- (a) The outer membrane is permeable to all kinds of molecules
- (b) The enzymes of electron transport chain are embedded in the outer membrane**
- (c) The inner membrane is highly convoluted forming a series of infoldings
- (d) The outer membrane resembles a sieve

18

The type of spent energy in Mitochondria is:

- (a) ADP
- (b) GTP
- (c) ATP
- (d) CTP

19

The metabolic process that does not take place in mitochondria is:

- (a) Aerobic respiration
- (b) **Anaerobic respiration**
- (c) Krebs's cycle
- (d) Pyruvic acid oxidation

20

In mitochondria,  $F_1$  particles are present on the:

- (a) Outer side of outer membrane
- (b) Inner side of the outer membrane
- (c) Inner side of inner membrane**
- (d) Outer side of the inner membrane

21

The inner membrane of mitochondria bears stalked particles on the inner surface, which are called:

- (a) Oxysomes
- (b) Elementary particles
- (c)  $F_0$ - $F_1$  particles
- (d) All of these

22

Which of the following pair is incorrect?

- (a) Ribosome: Protein synthesis
- (b) Chloroplast: Photosynthesis
- (c) Mitochondria: Fermentation**
- (d) Plasma membrane: Osmosis

23

An example of binucleated cell is:

- (a) **Paramecium**
- (b) Myocyte
- (c) WBC
- (d) Mature mammalian RBC

24

The nucleolus is formed of:

- (a) Protein & DNA
- (b) Protein & RNA**
- (c) Chromatin
- (d) Protein only

25

The nucleolus is formed of:

- (a) Heterochromatin & euchromatin
- (b) **Granular & fibrillar parts**
- (c) Nucleolus associated & peripheral chromatin
- (d) Condensed chromatin

26

**Nucleus has:**

- (a) DNA only
- (b) DNA & protein only
- (c) DNA, RNA and proteins**
- (d) None of these

27

Nucleolus is a prominent acidophilic spherical bodies in the nucleus.

The function is:

- (a) RNA synthesis
- (b) DNA synthesis
- (c) Histone synthesis
- (d) **Ribosomal subunit synthesis**

Which of the following cell lacks nucleus?

28

- (a) Cardiac cells
- (b) Mature mammalian RBCs**
- (c) WBCs
- (d) Bone cells

29

Which of the following organelles always contains DNA?

- (a) Centriole
- (b) Golgi apparatus
- (c) Lysosome
- (d) Mitochondrion**

30

Which of the following correctly describes the function of nucleoli?

- (a) The formation of new DNA molecule
- (b) The organization of the spindle fibres during nuclear division
- (c) The replication of mitochondria following nuclear division
- (d) The formation of ribosomes**

31

Which of the following cell structures contains the highest amount of RNA?

- (a) Centriole
- (b) Chromosome
- (c) Lysosome
- (d) Nucleolus

32

A tadpole's tail is gradually broken down during metamorphosis into an adult frog. Which organelle increases in number in cells of the tail at this time?

- (a) Centriole
- (b) Endoplasmic reticulum
- (c) Golgi apparatus
- (d) Lysosome

33

In eukaryotic cells, transcription occurs in the nucleus. In which other organelle does transcription occur?

- (a) Golgi apparatus
